

Module description: Analysis 1			
Module Code	t.BA.XXM4.AN1.19HS		
ECTS Credits	4		
Language of Instruction/Examination	German		
Organizational Unit	IAMP		
Module Coordinator	Marcello Robbiani		
Legal Framework	The module description is part of the legal basis in addition to the general academic regulations. It is binding. During the first week of the semester a written and communicated supplement can specify the module description in more detail.		
Module Characteristic	Type 3a 2 lecture lessons per semester week and class+ 2 lab bi-weekly lessons per semester and half-class		
Module Description	Introduction to calculus.		
Module Content	<p>Introduction to calculus</p> <ul style="list-style-type: none"> • the concepts of derivation and integration • applications of derivation and integration in physics <p>Elements of Calculus</p> <ul style="list-style-type: none"> • sets and numbers • applications and functions • sequences and series • limit processes and limits <p>Introduction to differential calculus</p> <ul style="list-style-type: none"> • derivations of first and higher order • elementary derivation rules • elementary applications of differential calculus • elementary analysis of graphs <p>The fundamental properties of elementary functions as $\exp(x)$, $\log(x)$, $\sin(x)$ are refreshed ad hoc during the semester based on BM-mathematics.</p>		
Prerequisite Knowledge	mathematics at the level of a technical BM		
Learning Objectives (Competences)	Students...	Competencies	Taxonomies
	You know the fundamental concepts of differential calculus. You are in particular able to calculate the derivative of an elementary function.	M, F	K2, K3
	You know the basic concepts of calculus assets and numbers, applications and functions, sequences and series, limit processes and limits and are able to apply this concepts in an efficient way. You are in particular able to calculate elementary limits.	F, M	K2, K3
	You know the concepts "derivative" and "antiderivative" and their role in cinematics. You are in particular able to derivate polynomiale functions.	F, M	K2, K3
	You know elementary applications of differential calculus (e.g. Newton's tangent method). You are in particular able to analyse the graph of a rational function.	M, F	K2, K3

Module description: Analysis 1

Performance Assessment	End-of-module exam	Assessment	Length (min.)	Weighting	Form
	written exam	Grade	90	80	acc. to module agreement
	Performance assessment during the semester				
	Performance assessment during the semester	Assessment	Length (min.)	Weighting	Form
	Graded assignments during teaching semester	Grade		20	acc. to module agreement
Classroom Attendance Requirement	None				
Learning material	<ul style="list-style-type: none"> Papula, L. (2018). Mathematik für Ingenieure und Naturwissenschaftler. 15 Edition. Wiesbaden: Springer. ISBN 978-3-658-21745-7.
